

SYSTEMS AND METHODS FOR PLAYLIST CREATION AND PLAYBACK

ABSTRACT OF THE DISCLOSURE

Systems and methods for playlist creation and playback are disclosed. An exemplary method involves receiving a video. The video is played on a display device. A user's designation of a video segment from the video is received. The video segment is added to a playlist. Adding the video segment to the playlist may involve generating display instructions for displaying the video segment and adding the display instructions to the playlist. The video segment may be played back on the display device in response to a user request.
